grass parakeet, Neophema splendida, also known as the splendid parakeet, is a beautiful bird nearing extinction in its native Australia. The male scarlet-chested grass parakeet is an extremely beautiful bird with a green head, blue back, bright red chest, and yellow underbelly. The blue-green female pales in comparison. Paul Henry, an avicultural society member of New South Wales (NSW) Society, was interviewed by Graeme Phipps, a life member and current president of the society. Paul noticed one of his young Bourkes doing a bounce and flair on his perch. He is definitely a male, not only do male Bourke Parakeets put their shoulders back and slightly flair their wings at the shoulders but if they add a bounce too that’s a clear indication of a male. In this photo, the male is at the far left. Shoulders back, head up, the turquoise parrot is a member of the genus Neophema, which includes blue-winged parrots, elegant parrots, rock parrot, scarlet-chested parrot, and the orange-bellied parrot. These are commonly called grass parrots. Bourke’s parrot has recently been removed from the Neophema genus and placed in a genus of its own. To breed the Bourke’s parrot, we should know the specific characteristics of this bird species. The Bourke is not a Neophema species but is a separate species. This is proven in practice and research. The plumage and possession of feather structure and pigment are important to the mutation breeder. Dr. Alain Campagne, who has been keeping birds since the 1970s and since 2000 has been seriously involved in the breeding of Neophema and Neopsephotus species, is one of the growing number of modern aviculturists who have embraced the internet and participate in. The Rose-ringed parakeet, Psittacula krameri, also known as the ring-necked parakeet, is a medium-sized parrot in the genus Psittacula of the family Psittacidae. It has disjunct native ranges in Africa and South Asia and is now introduced into many other parts of the world where feral populations have established themselves and are bred for the exotic pet trade. The Indian ringneck parakeet is a subspecies of the Rose-ringed parakeet, Psittacula krameri, and the many sub-species are scattered throughout Africa and Asia. The Indian ringneck is an Asiatic parrot and originally from Ceylon though it is now found in many parts of Asia, notably India and Pakistan. What others are saying: How to take care of a budgie Parakeet, argue with a Cockatoo, Best Talking Parrot in the World. Bourke’s parakeet, Neopsephotus bourkii, formerly known as Neophema bourkii, also known as the Bourke’s parakeet, Bourke or Bourkie, is a small parrot originating in Australia and the only species in its genus Neopsephotus. Just bought some Bourke’s parakeet tonight from a local pet store. The sales person at the store told me that 1 bird is male and 1 bird is female. However, I’ve been burnt like this before, so I just want to make sure they are what they are. Before I release them into the aviary tomorrow if anyone can help me here is a picture, looking to add a lutino Bourke, and am confused by the published genetic profiles of various crosses depending on sex of the lutino. I get what would the results be of, the Bourke’s parrots, which has recently been removed from the genus Neophema which included the blue-winged parrot, elegant parrot, rock parrot, scarlet-chested parrot, turquoise parrot, and the orange-bellied parrot. These are commonly called grass parrots. Aviary notes: Product description. Dr. Alain Campagne has been keeping birds since the 1970s and since 2000 has been seriously involved in the breeding of Neophema and Neopsephotus species. He is one of the growing number of modern aviculturists.
